

Ice Sensory Bin

Ice Ice baby! Ice is interesting for kids to transfer and in this activity they will do just that - use tongs or laddles to transport ice from water to another bin.

Sensory bins are sure to keep my kids busy for a while so that I can get a short break. This ice and water sensory bin is so easy to setup and doesn't require too many supplies. You just need to make sure you have ice in the freezer. Add the ice and water to a bin inside a bigger bin, add utensils and bowls and invite your kids to play. This activity is great for warmer weather but can be done indoor as well.

Kids will learn about:

Sensory
Hand-eye Coordination
Colour Recognition
Fine Motor Skills

Categories:

Quiet Time
Sensory
Outdoor
